AI-Powered Dynamic Narrative System for RPG

Duncan Law

Game World & Story:

The universe is dying a slow collapse called Void Entropy. humanity refused to accept it. The Flying Monster is a deity preaching that broadcasting pure positive energy through the Law of Attraction could reverse the decay.
Pray hard enough.
Think positively enough. And the universe will heal.
You are a reluctant recruit in the GDA1. Your teammates will sabotage every plan, dodge every responsibility, and make you feel like you are the problem, yet you must stay positive or face Gloria's moral intervention.
Stay too positive, and you personally accelerate the world's destruction.
Three bars track your doom: Reality Score, Positive Energy, and Void Entropy
There is no victory condition, no exit.

The AI That Writes Your Doom

Every line of dialogue, every mission, every moral dilemma is generated in real time by a Large Language Model.

The system uses a 3-layer memory architecture:
World Bible, immutable lore and rules
Short-term context, the current scene
Long-term summaries, your past choices, are haunting you.

The Prayer System is the centrepiece: you type hopeful words → the AI engineers a perfectly ironic disaster from them.

A Butterfly Effect Tracker feeds every decision back into future prompts, so your choices echo forward through the story.
The AI also directs the visuals, selecting character expressions, backgrounds, and symbolic objects to match what it's generating.
